NJV Athens Plaza selects Budgeting Planning & Monitoring software of ATC

NJV Athens Plaza has chosen Athens Technology Center (ATC) and its pcFinancials platform for its end to end budget planning and monitoring processes. This project stands within NJV's broader strategy of continuously improving its efficiency and effectiveness by implementing specific procedures and good practices.

pcFinancials platform, which ATC distributes exclusively for the region of Greece and Cyprus on behalf of the Swedish DSPanel, is the simplest, smarter and most rational tool that every finance team needs for budget planning, training and monitoring purposes, since pcFinancials platform is compatible with the vast majority of ERP systems available (ERP agnostic).

The platform's deployment will be cloud-based, designed to be fully owned by the NJV Financial Management in a reasonable and predictable subscription pricing. The overall implementation plan does not require investment in equipment, it guarantees always fully updated versions, focused to the unique business needs of the hotel sector. The project is scheduled to be completed in a very short period so that the service to be fully operational for the 2018 Budget.

Athens Technology Center (ATC) is the Authorized Distributor of DSPanel in Greece and Cyprus since 2015, enriching its extensive experience and know-how in the implementation of ERP / FRP in Financial Institutions and Manufacturing (Discreet Manufacturing or Make-to-Order "Or" Configure-to-Order "). ATC has been active for more than 30 years in the EU, the Balkans, Central Europe, the Middle East and North Africa.
